Shed Starter Box Design

This shed style starter box was designed with the intention of using 1X12 (7/8" X11.25") barn pine as the base material. A 12' board will make this box & door. This box has screws holding it together but you could also use nails & waterproof glue. The box can be painted or stained and embellished as you like to make it your own!

Note: The box requires some type of roof water proofing to be usable. (shingles, paint, cedar, metal/copper,etc)

Shed box front and inside

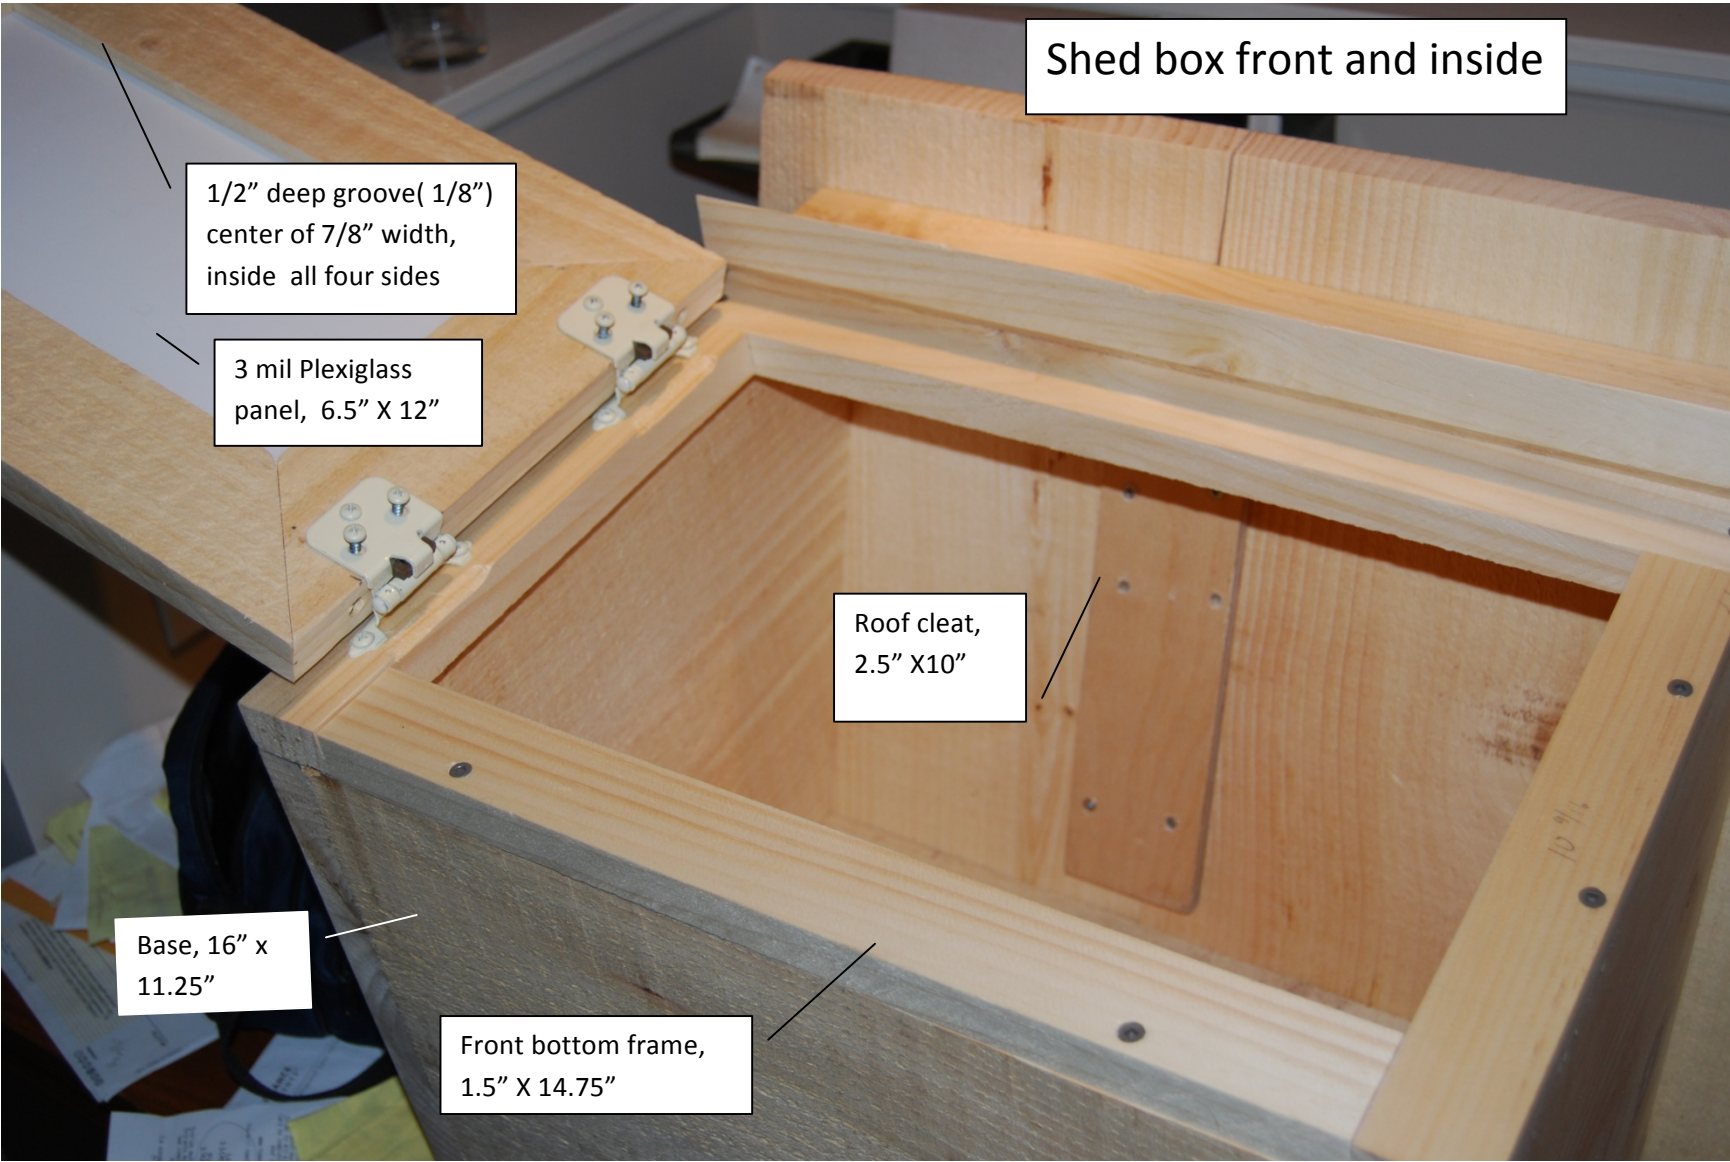

1/2" deep groove(1/8")
center of 7/8" width,
inside all four sides

3 mil Plexiglass
panel, 6.5" X 12"

Roof cleat,
2.5" X10"

Base, 16" x
11.25"

Front bottom frame,
1.5" X 14.75"
